Three meanings of equality

Illustrative actions and stipulated laws

Reported tie

An action

Grades (1, 1): no direction is issued.
Targets may still be (2, 0).

Positive equality mass

A property of the law

Targets (1, 0) or (0, 0), each with probability 1/2.
Equality occurs in some states.

Declared structural identity

A restriction and a compatible law

Targets (1, 1) or (0, 0), each with probability 1/2.
The declared identity holds surely; the grade guard applies.

At target equality, weak-error costs are 1 for an assertion and tau for withholding.
The equality-neutral loss gives both actions cost 0.
