Independent domains, non-product feasibility

Each forward direction has error 1/10.
Joint cap = 3/20; strict threshold = 0.

Domain 1 \ Domain 2	W	AB
W	W / W J = 0 R = 1/3 Feasible	W / AB J = 1/10 R = 13/60 OPTIMAL
AB	AB / W J = 1/10 R = 13/60 OPTIMAL	AB / AB J = 19/100 R = 1/10 EXCLUDED

The feasible projections are {W, AB}.
Their product has four cards;
the actual feasible family has three.
Both one-disclosure cards are optimal.

W withholds; AB ranks Alder above Birch.
