Same domain marginals, different error overlap

Fixed card: issue both positive directions.
Each domain has error probability 1/10.
Shared cap = 3/20; threshold = 0.

Coincident errors

Target signs	Mass
(+,+)	9/10
(-,+)	0
(+,-)	0
(-,-)	**1/10**

J = 1/10 **PASSES**

Disjoint errors

Target signs	Mass
(+,+)	4/5
(-,+)	**1/10**
(+,-)	**1/10**
(-,-)	0

J = 1/5 **FAILS**

The fixed card has risk 1/10 under both laws.
Coincident: both directions are optimal (1/10).
Disjoint: either single direction is optimal (7/40); retain both tied cards.

Signs refer to unit 1; unit 2 is zero.
The full domain vectors have the same law.
