Maximum disclosure at five joint budgets

n = 4; D = 2; M = 6 per domain.
w = (1/2, 1/2); τ = (1/10, 1/10).

Coincident errors

Joint budget α	0	1/40	1/20	2/25	1/10
Direct joint	**10**	**10**	**12**	**12**	**12**
Equal Bonferroni	10	10	10	12	12
Optimized Bonferroni	10	10	11	12	12
Common grades + joint	0	0	10	10	10

Disjoint errors

Joint budget α	0	1/40	1/20	2/25	1/10
Direct joint	**10**	**10**	**11**	**12**	**12**
Equal Bonferroni	10	10	10	12	12
Optimized Bonferroni	10	10	11	12	12
Common grades + joint	0	0	6	10	10

Mean limits q = (1/20, 1/20); full-domain strict failures $F > 0$; inclusive joint cap $J \le \alpha$.

Separate objective B: total domain disclosures.
