Minimum risk at five joint budgets

n = 4; D = 2; M = 6 per domain.
w = (1/2, 1/2); τ = (1/10, 1/10).

Coincident errors

Joint budget α	0	1/40	1/20	2/25	1/10
Direct joint	**1/60**	**1/60**	**1/150**	**1/150**	**1/150**
Equal Bonferroni	1/60	1/60	1/60	1/150	1/150
Optimized Bonferroni	1/60	1/60	7/600	1/150	1/150
Common grades + joint	1/10	1/10	7/300	7/300	7/300

Disjoint errors

Joint budget α	0	1/40	1/20	2/25	1/10
Direct joint	**1/60**	**1/60**	**7/600**	**1/150**	**1/150**
Equal Bonferroni	1/60	1/60	1/60	1/150	1/150
Optimized Bonferroni	1/60	1/60	7/600	1/150	1/150
Common grades + joint	1/10	1/10	4/75	7/300	7/300

Mean limits q = (1/20, 1/20); full-domain strict failures $F > 0$; inclusive joint cap $J \le \alpha$.

Stored exact optima; no interpolated budgets.
