Three-domain coupling and minimum risk

n = 2; D = 3; original M = 1.
Complete family: 27 profiles.
Each forward direction has error probability 1/15.

$w_d = 1/3$; $\tau_d = 1/4$; $t_d = 0$;
$\alpha = 1/10$; no mean constraints.

Coincident errors	Risk	I
Direct joint	1/15	3
Equal Bonferroni	1/4	0
Optimized Bonferroni	17/90	1

Disjoint errors	Risk	I
Direct joint	17/90	1
Equal Bonferroni	1/4	0
Optimized Bonferroni	17/90	1

Risk: minimum expected error–withholding loss.
I: issued pair-domain directions at a risk minimizer.

The joint event is the union across all three domains.
