Three-domain coupling and minimum risk

n = 2; D = 3; original M = 1; complete family: 27 profiles.

Each forward direction has marginal error probability 1/15.

w_d = 1/3; τ_d = 1/4; t_d = 0; α = 1/10; no mean constraints.

Method	Coincident errors		Disjoint errors	
	Risk	I	Risk	I
Direct joint	**1/15**	**3**	**17/90**	**1**
Equal Bonferroni	**1/4**	**0**	**1/4**	**0**
Optimized Bonferroni	**17/90**	**1**	**17/90**	**1**

Risk: minimum expected error–withholding loss.
I: issued pair-domain directions at a risk minimizer.

The joint event is the union across all three domains.
