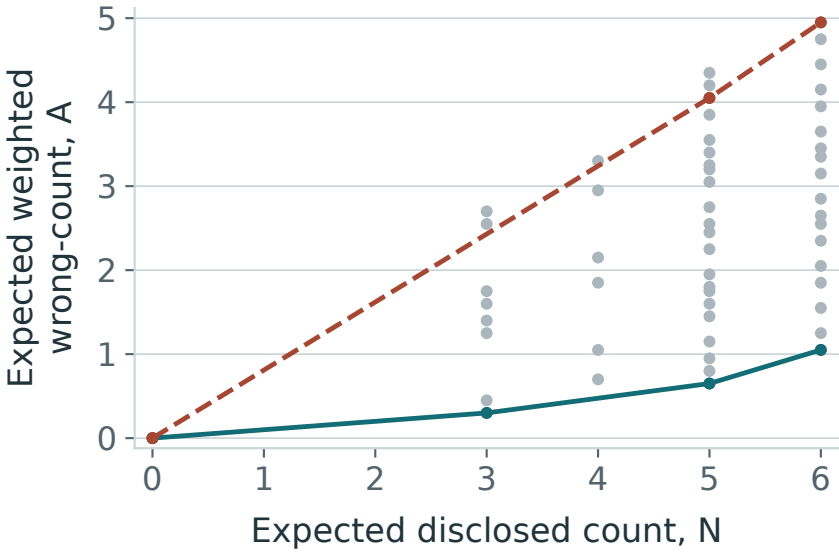
Matched disclosure under one exact law

Four units; weights (3/5, 2/5); M = 6.
Both axes use expected raw counts.

A. Report families: A = 0–5

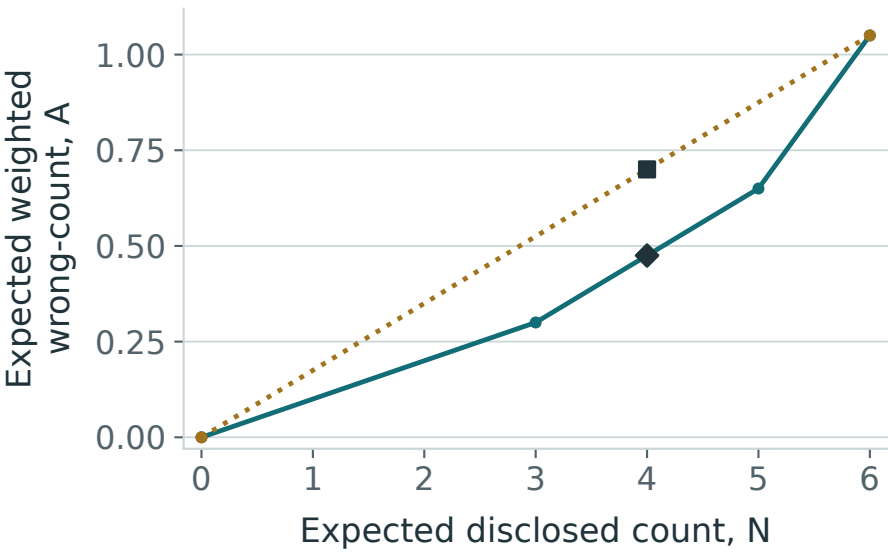


Exact frontier: all 75 reports

Imposed reverse order DCBA

Grey: 55 distinct coordinates; equal sizes.

B. Enlarged scale: A = 0–1.1



Exact frontier

Two-endpoint candidate hull

■ N = 4: best deterministic A = 7/10.
◆ Mean N = 4: mixture A = 19/40.

Mix (1,1,1,2) and (1,2,2,3) equally,
independently of the latent state.
Mix whole reports, never pair decisions.

N = 5: sparse A = 7/8; exact A = 13/20;
gap = 9/40. Sparse hull omits reports
and lies on or above the exact frontier.
