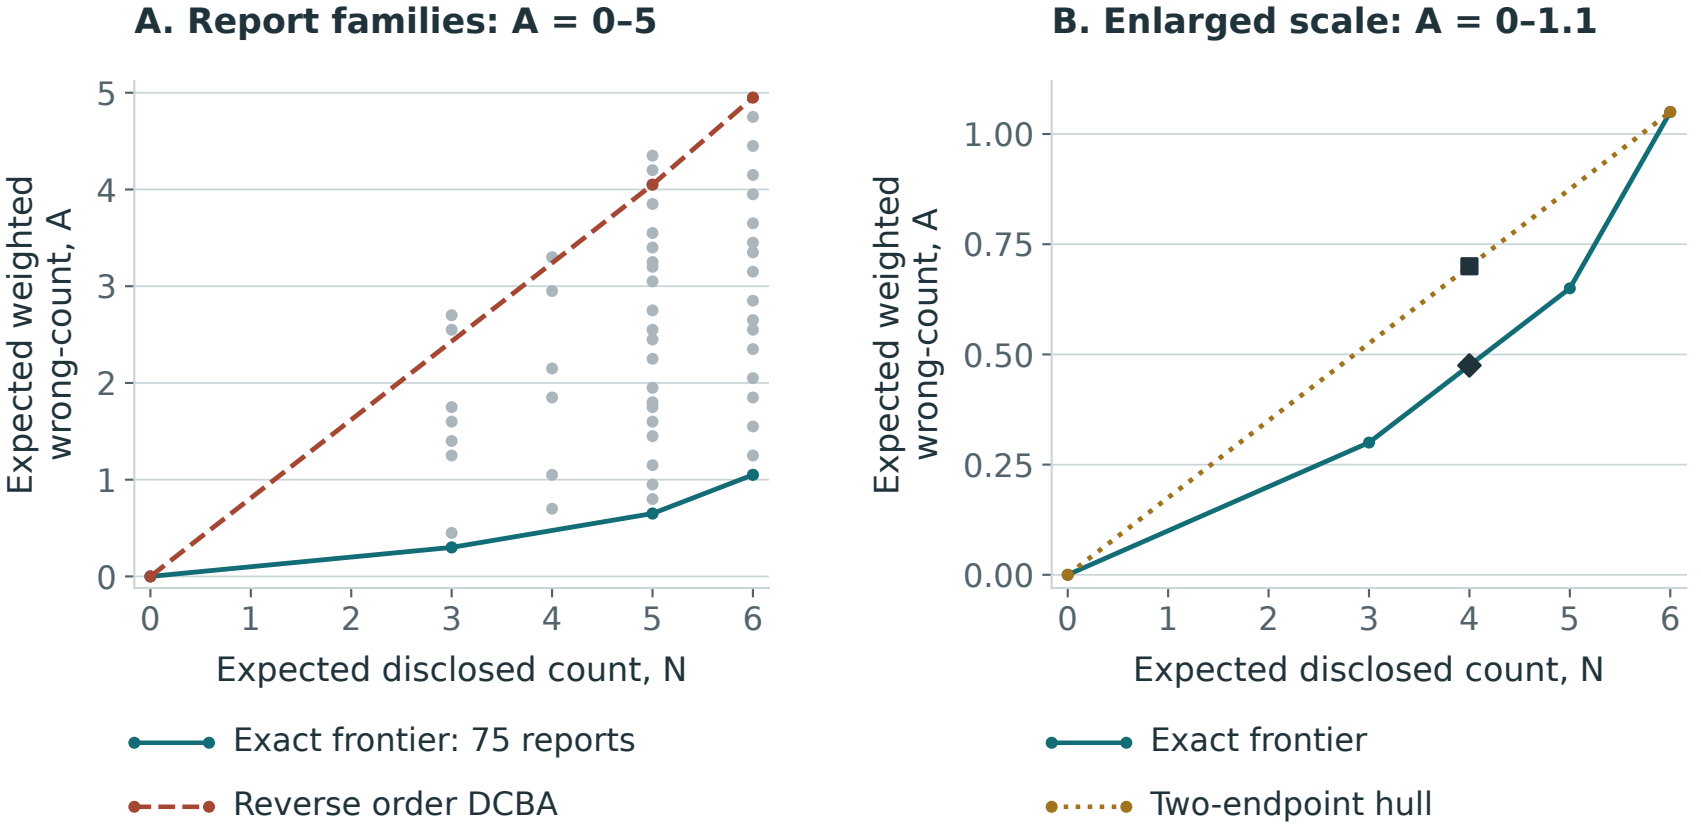
Matched disclosure under one exact law

Four units; weights (3/5, 2/5); M = 6.
Both axes use expected raw counts.



Grey: 55 distinct coordinates, equal sizes. Panel vertical scales differ.

■ N = 4 deterministic: A = 7/10; ◆ mean N = 4 mixture: A = 19/40.

Mix (1,1,1,2) and (1,2,2,3) equally, independently of the latent state.
Randomize whole reports, never pair decisions.

N = 5: sparse A = 7/8; exact A = 13/20; gap = 9/40.
The sparse hull omits reports and lies on or above the exact frontier.
