Established results and future evidence

Different claim roles; no implied empirical completion

Keep both targets visible

Composite magnitudes: coefficients a.
Criterion-direction errors: weights w.

Inherited foundations

Posterior decisions: specified loss.
Bayesian ranking: estimate/rank/select.
KRW: coherent scalar report cards.

Inheritance,
with attribution.

Adaptations and derivations

Coherent common reports and pair costs.
Domain-specific optimization/bounds.
Matched disclosure; evaluation laws.

Conditions: law, loss,
family and assumptions.

Documented software routes

Historical weak-error route.
Guarded equality-neutral subset.
Implementation scope is limited.

Not every theorem,
protection or diagnostic.

Prospective empirical evaluation

Differences, decomposition, settings.
Costs under other native objectives.
Calibration under an evaluation law.

The main empirical study
remains prospective.

Bounded illustrations

Exact finite examples show possibilities under declared laws.
Two KRW action reconstructions support bounded consistency,
not a superior frontier or producer validation.

Measurement validity • authorized preferences • causal benefit:
further evidence required.
