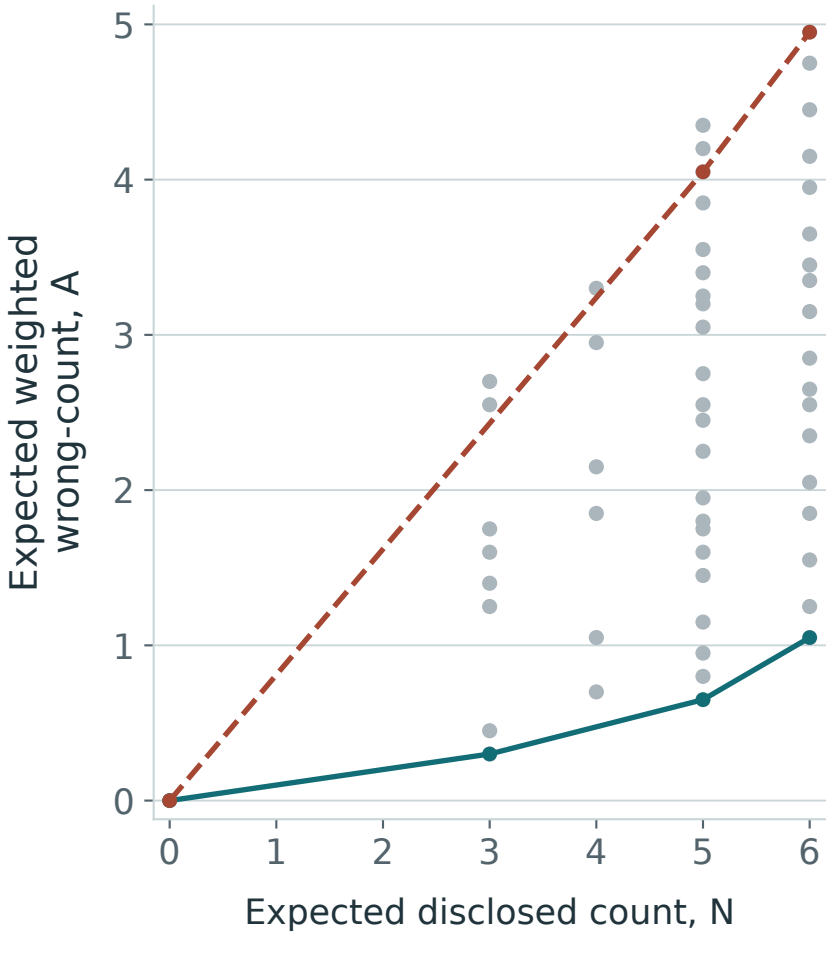
Matched disclosure: one exact law

Four units; six unordered pairs.
Axes show expected raw counts.
Fixed law: weights (3/5, 2/5); M = 6.

A. Same law, different report families

Full vertical scale: A = 0 to 5



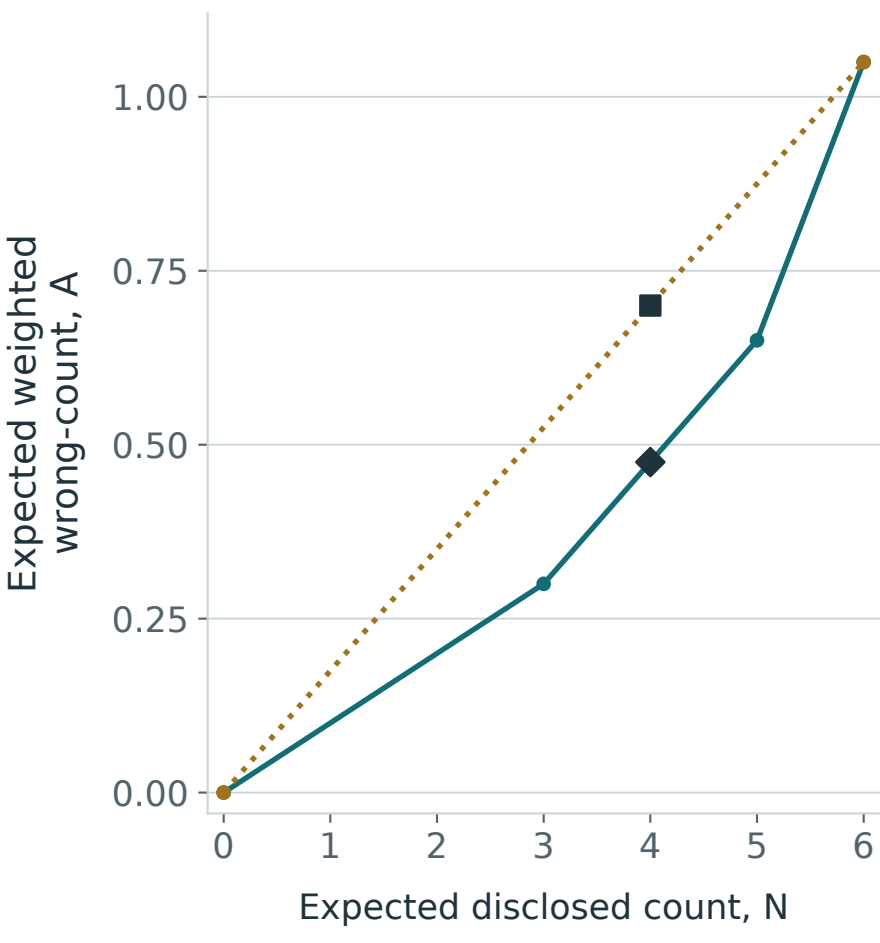
Exact frontier: all 75 reports

Imposed reverse order DCBA

Grey points: 55 distinct coordinates from 75 reports; equal point sizes.

B. Whole-report mixing and a sparse hull

Enlarged vertical scale: A = 0 to 1.1



Exact frontier

Two-endpoint candidate hull

Best deterministic report at N = 4: A = 7/10

Whole-report mixture at mean N = 4: mean A = 19/40

Choose g = (1,1,1,2) or (1,2,2,3), each with probability 1/2, independently of the latent state. Do not mix pairs.

At N = 5: sparse A = 7/8;
exact A = 13/20; gap = 9/40.

Panel vertical scales differ. The sparse hull omits feasible reports and lies on or above this exact frontier.
