Choose the comparator by the institutional task

Ranking aggregation

INPUT	Supplied rankings
OUTPUT	Consensus ranking or bucket order
ROLE	Disagreement between supplied relations

SMAA-2

INPUT	Criteria and a modeled space of valuations
OUTPUT	Rank-acceptability profiles
ROLE	Variation across modeled criteria and valuations

Preference sorting

INPUT	Performances and class judgments
OUTPUT	Assignments to predefined classes
ROLE	Unknown preference model; consultation in one variant

Multidomain posets

INPUT	Known domain-specific partial orders
OUTPUT	Simplified relation or ordered buckets
ROLE	Uniform linear extensions of specified posets

Comparative judgement

INPUT	Assessor choices between items
OUTPUT	Pair support and rank summaries
ROLE	Uncertain assessor preference propensities

Posterior grading

INPUT	Beliefs about latent criterion targets
OUTPUT	One coherent ordered grade report
ROLE	Expected reporting loss under a declared law

Native tasks differ. No common objective, probability law or action family is implied.
