Weights change the selected report

Each state has probability 1/2:
(A, B) = ((1, 1), (0, 0))
or ((1, −1), (0, 0)).

Thick segments: minimum weighted risk

Hold ω < 1/2	A>B ω > 1/2

At ω = 1/2: both Hold and A>B minimize.

Expected-criterion minimax

Included criteria fixed at {1, 2}

Report	R_1	R_2	Max
A>B	0	1/2	1/2
B>A	1	1/2	1
Hold	**1/4**	**1/4**	**1/4**

Unique minimax action: Hold

w = (ω, 1−ω); τ = 1/4; M = 1.
All three reports remain available.

Both criteria remain in minimax at ω = 1.
The weight switch changes preferences,
while the target law stays fixed.
