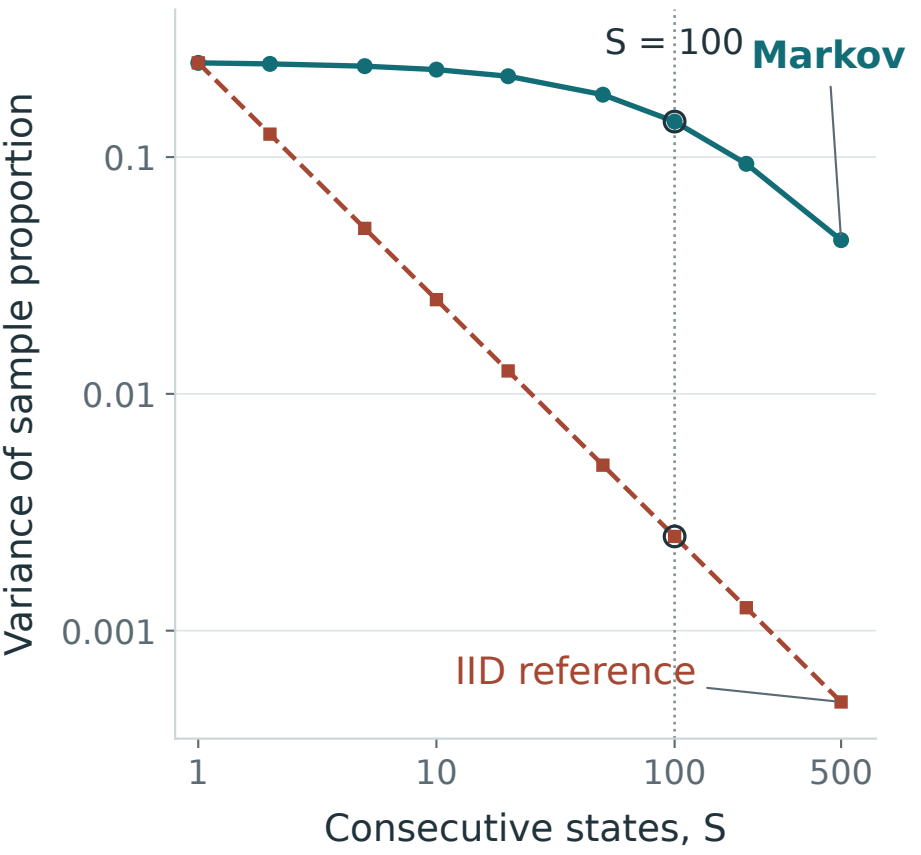
Stationarity does not supply independent-draw precision

Known stationary law.
All calculations are analytic.



Known transition law

From	Next 0	Next 1
0	0.99	0.01
1	0.01	0.99

Initial P(0) = P(1) = 1/2

At S = 100

Markov variance	**0.14125**
IID variance	**0.00250**
Finite equivalent count	**1.770**
Asymptotic expression	**1.010**
No-switch probability	**0.36973**

Counts compare variance only.
Neither is estimated ESS or an IID tail bound.
Markers: nine integer sample lengths.
Segments guide the eye; no path simulated.
