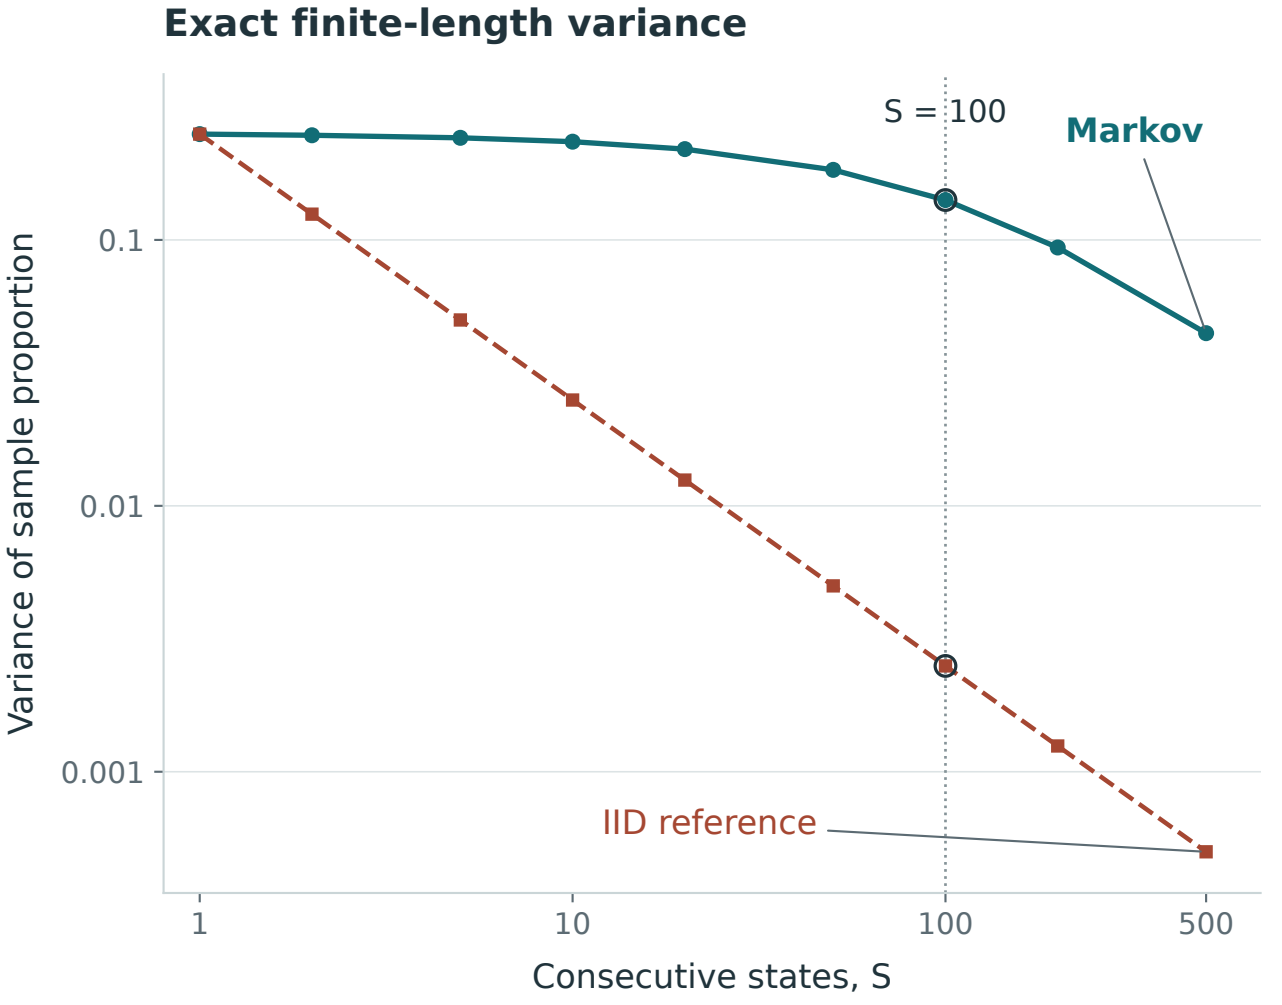
Stationarity does not supply independent-draw precision

Known stationary law; all calculations are analytic. No path was simulated.



Known transition law

From	Next 0	Next 1
0	0.99	0.01
1	0.01	0.99

Initial P(0) = P(1) = 1/2

At S = 100

Markov variance	**0.14125**
IID variance	**0.00250**
Finite equivalent count	**1.770**
Asymptotic expression	**1.010**
No-switch probability	**0.36973**

Equivalent counts compare variance only; neither is estimated ESS or an IID tail certificate.
Markers are nine integer sample lengths; connecting segments guide the eye. No path was simulated.
